TechEX 2022 Call for Proposals – CAMP Week

Denver, CO | December 5 – 9, 2022
Submit Proposal Here

We invite you to submit an idea for a session and collaborate with peers who are just as passionate as you are about sharing their expertise through the Identity and Access Management (IAM) track, also known as CAMP Week! The world is changing, and how we approach IAM is evolving with it. We are actively seeking folks with IAM experience to deliver thought-provoking, informative presentations to our community during the Campus Architecture and Middleware Planning (CAMP) track. To put it simply, we want your insight and participation as forward-thinking leaders who push the IAM envelope!

Think creatively about your perspective and the happenings at your institution as well as current trends and hot topics. Then, develop a proposal! Submissions can be for presentations, demonstrations, storytelling, and/or panel discussions.

Below are some suggested themes to help you get started, but we welcome all related topics - especially those that address what differentiates us from other communities. For example, perhaps you can suggest subject matter based around the "usual topics", while adding a twist or unique interpretation to educate, enlighten, and encourage the people who help make research and education tick.

We look forward to reviewing your submission, thank you! **Submit your proposal here.**

Business Drivers with Managing Identities	Community & Collaboration	Hybrid IAM Environments	IAM's Role in Managing Cyber Security Risk
— Unique challenges of operating in a research and education environment, such as anonymous or pseudonymous identity and multilateral federation — Management of service providers (by academia, research, or industry) in the InCommon Federation — Other areas of interest in regulatory issues, accessing services, data, or other resources	— Establishing or supporting research collaborations or virtual organizations — Sharing best practices for solving an IAM problem at your organization by telling your story — Supporting international collaborations	— Using commercial and InCommon Trusted Access Platform components to support the academic mission — Implementing Identity and Access management, integration, and migration in on-prem and cloud environments — Managing permissions, group management, and service provisioning access, both locally and to the cloud — Linking multiple SSO Systems for a better user experience	— Understanding REFEDS MFA Profile, SIRTFI, Assurance Framework — Sharing REFEDS implementation experiences — Identifying and solving challenges related to privacy as it relates to access control and user consent — Exploring Zero Trust and IAM — Managing vendor security risks
